

Join us on December 17, 2020
for the next GEN IV webinar

Development of Multiple-Particle Positron Emission Particle Tracking for Flow Measurement

Flows in opaque systems can present a significant challenge to experimental investigators. Understanding flow phenomena in reactor components often relies on the use of simulation, as well as experiments using surrogate materials and fluids to allow optical access. Positron emission particle tracking (PEPT) is a radiotracer-based technique that uses the same technology as the medical imaging platform PET (positron emission tomography). As such, PEPT can be used to directly study flows in opaque systems. The research focus has been on the development and deployment of new PEPT reconstruction algorithms that allow the simultaneous tracking of multiple tracers, increasing data collection efficiency and enabling new measurements. Herein Dr. Wiggins will discuss the basics of PEPT, as well as its utility for measurements in pipes, heat exchangers, and pebble beds, among other systems. The data gleaned from such experiments can be used for both fundamental understanding of flow phenomena and validation of the computational fluid dynamics models being used for next generation reactor design.

Who should attend: policy makers, managers, regulators, students, general public

Meet the Presenter...

Dr. Cody Wiggins is currently employed as a postdoctoral research associate at Virginia Commonwealth University (VCU) in the Department of Mechanical and Nuclear Engineering. He received his B.S. from the University of Tennessee, Knoxville (UTK) in Nuclear Engineering in 2014 and his Ph.D. from UTK in Physics in 2019. Dr Wiggins's research has focused on experimental fluid dynamics, including pure and applied research components. His primary interest has been in the development and deployment of positron emission particle tracking (PEPT) – a radiotracer-based method for flow measurements in opaque systems. He is now studying thermal hydraulics for advanced energy applications, while maintaining a focus on the advancement of PEPT. Dr. Wiggins was the winner of the American Nuclear Society's "Pitch your PhD" competition in November 2019.

The Generation IV International Forum invites you to attend web-based lectures on the next generation of nuclear energy systems and other cross-cutting subjects. Join internationally recognized subject matter experts and leading scientists in the nuclear energy arena for these short presentations.

Upcoming Webinars

28 January 2021	MOX Fuel for advanced reactors , Dr. Nathalie Chauvin, CEA, France
25 February 2021	Overview of Waste Treatment Plant, Hanford Site, Dr. David Peeler, PNNL, USA
25 March 2021	Introducing new Plant Systems Design (PSD) Code, Mr. Nawal Prinja, Jacobs, UK
